

CM 880

WELT FOLDING MACHINE with speed variator

The folding machine is used to assemble some types of welts after they have been cemented. The main features of the machine is that the upper rollers are always engaged, whatever thickness is processed, therefore obtaining a perfect linearity of the product.

The slide of the welt is assembled on a group of slides, thus allowing its perfect adjustment next to the rollers. The machine is equipped with an electric pedal and is prepared to work in tandem with the CM 920 cementing machine.

The machine is equipped with a set of accessories to carry out part n. 2 unless we receive a specific requirement from the customer.

Technical data:

Hour production	10-60 mt/min
Dimensions	cm. 68x53x123
Net weight	Kg. 147
